

Oracle Integration with AI. Part III (and last until we get better results).

Generating integrations + some comments.

May 17th, 2025.

Introduction.

This post contains the third chapter of my testing of OIC with AI.

It will be the last for now as we see there is a road to get complete integrations, we will be watching carefully for more people posting regarding this subject.

We will play with SaaS events for Procurement purchase orders.

Preparatory steps.

For this exercise you will need an OIC instance with AI enabled, step which can be done here if you have administrator privileges.

The connections are:

 XX_DEMO_REST_INTEGRATIONS	REST
 AA_DEMO_FTP	FTP
 XX_DEMO_ERP	Oracle ERP Cloud
 XX_DEMO_REST	REST

a) Erp connection.

< XX_DEMO_ERP

Configured - View only

Role
Trigger and invoke

Identifier
XX_DEMO_ERP

Our prompt.

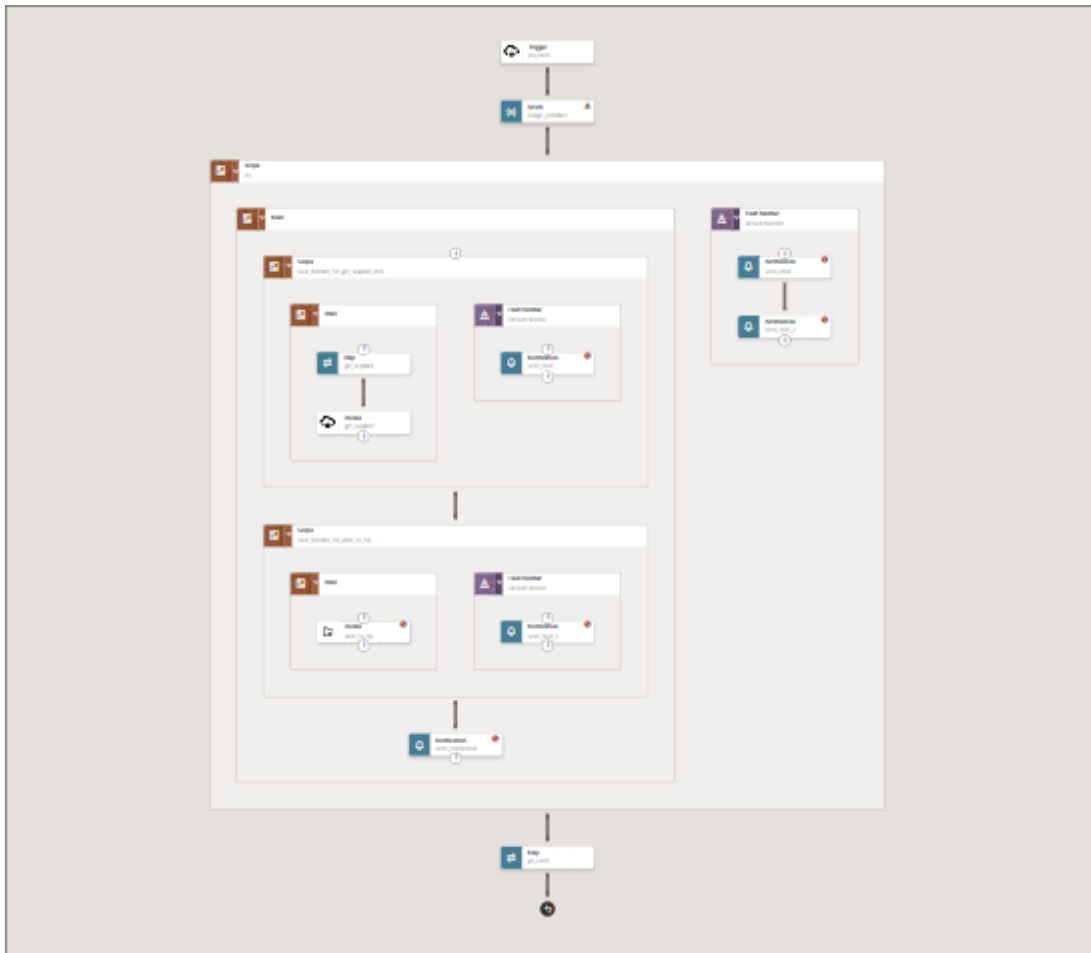

1. I started with this.

NOTICE: I got this after quite a few iterations “trial and error”.

*Send an OIC notification on creation of a purchase order that uses Oracle ERP Cloud connection XX_DEMO_ERP.
The integration will be event-based on purchase order creation.
The purchase order event in Oracle ERP Cloud will trigger the integration.
Before sending notification, query the supplier of the purchase order to find the mail of the supplier contact, using the connection Oracle ERP Cloud connection XX_DEMO_ERP.
The information of the purchase order will be stored also in FTP server using the connection.
The FTP connection to write files will be "AA_DEMO_FTP".
Notify the user about errors if there are any failures. Create a fault handler for each of the invoke nodes.*

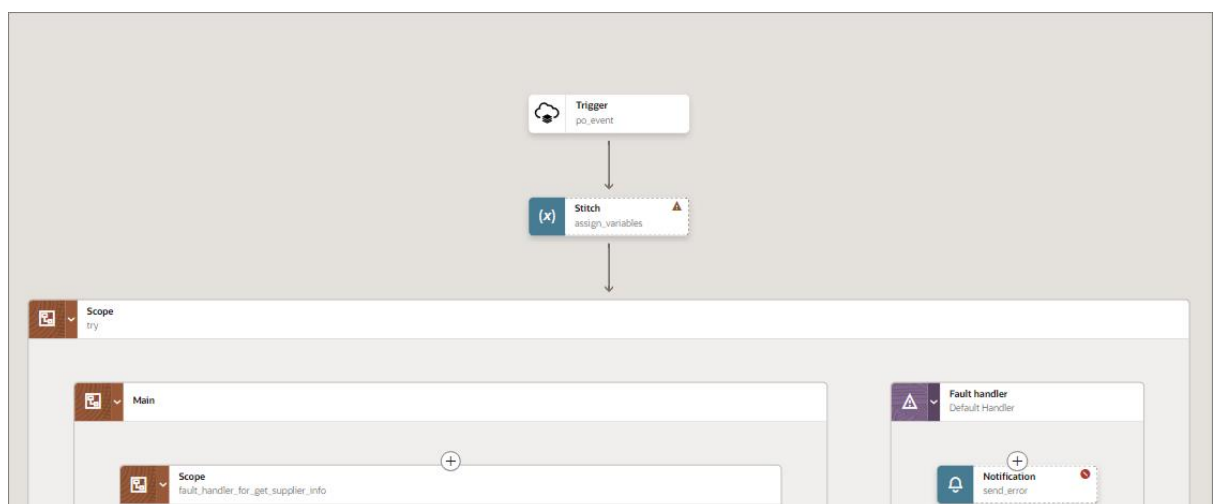

*After initial node create an assign variables node.
Create a map for get_supplier_info with supplier id from event payload.*

High level overview of the result.

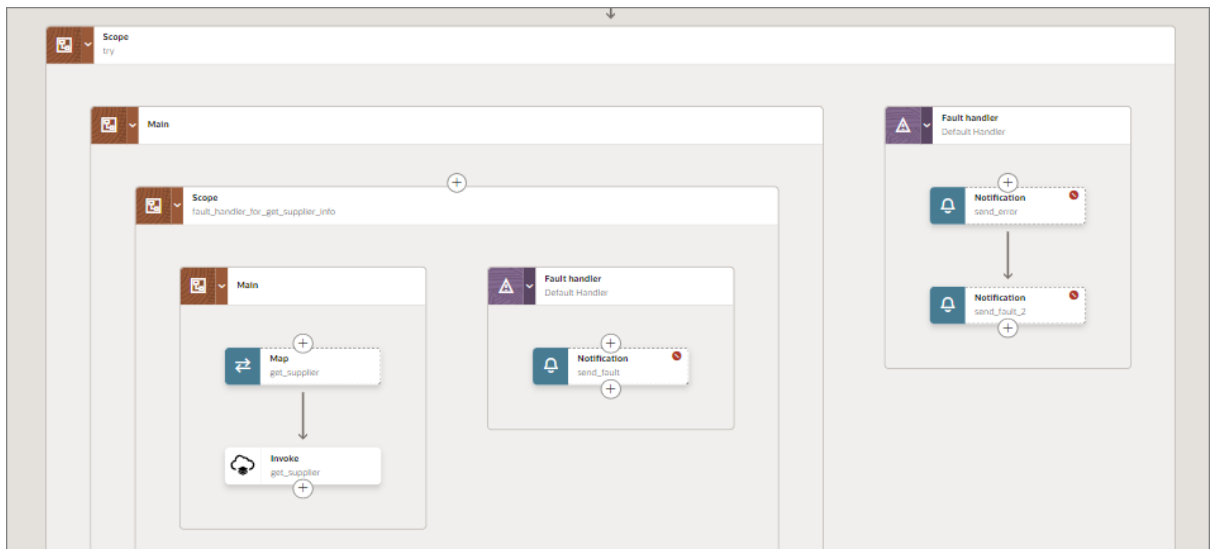

Notice we get the following:

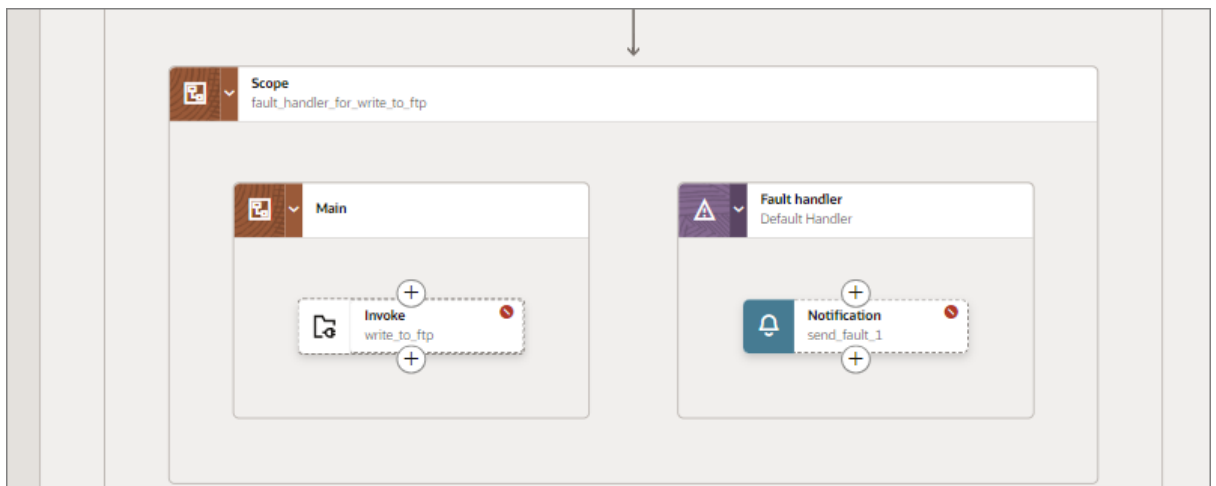

- 1) Correct nodes with proper connections and proper names.

- 2) The node to query supplier data.

3) The FTP Write activity to store.

Code provided.

AA_DEMO_AI_03.car: project with integration demo and trials is provided.

The integration for this demo is XX_PROMPT_06.

Feel free to complete integration and put it to work.
